and mouse cDNA sequences.",
Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-I- FUNCTION: May play a role in the formation and regulation of the tight junction (TU) paracellular permeability barrier.

-I- SUBUNIT: Interacts with TUP1/ZO1 and with VAPA.

-I- SUBCELLULAR LOCATION: Integral membrane protein.

-I- TISSUE SPECIFICITY: Localized at tight junctions of both epithelial and endothelial cells. Highly expressed in kidney. Not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                            detected in testis.

DOWAIN: The C-terminal is cytoplasmic and is important for interaction with Zo-1. Sufficient for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity).

PTM: Phosphorylated (By similarity).

SIMILARITY: Belongs to the ELL / occludin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

-1- SUBCELLULAR LOCATION: Integral membrane protein.
-1- SUBCELLULAR LOCATION: Integral membrane protein.
-1- TISSUE SPECIFICITY: Localized at tight junctions of both epithelial and endothelial cells.
-1- DOMAIN: The C-terminal is cytoplasmic and is important for interaction with 20-1. Necessary for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity).
-1- PTM: Phosphorylated. Less-phosphorylated forms are found in basolateral membrane, cytosol and tight junction. More-heavily phosphorylated forms are concentrated exclusively in tight
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EMBL; U49221; ANYSCOLOSTICAL STREET S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Potential.

DOWAIN: The C-terminus is cytoplasmic and is important for interaction with ZO-1. Necessary for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Coiled coil; Phosphorylation; Tight junction; Transmembrane. The DNA sequence of human chromosome 21.";

Anture 405:311-310 condition of hair cortex, hair keratin intermediate filaments are embedded in an interfilamentous matrix, consisting of hair extensive disulfide bond cross-linking with abundant cysteine cresidues of hair keratins.

The SUBUNT: Interacts with hair keratins.

TISSUB SPECIFICITY: Detected in the upper portion of the hair
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. and mouse cDNA sequences.",

Proc. Nacl. Acad. Sci. U.S.A. 99:16899-16903(2002).

- FUNCTION: May play a role in the formation and regulation of the cight junction (TJ) parcellular permeability barrier.

- FUNCTION: May play a role in the formation and regulation of the tight junction (TJ) parcellular permeability barrier.

- SUBINIT: Interacts with TJP1/ZO1 and with VAPA.

- SUBINIT: Interacts with TJP1/ZO1 and with WAPA.

- SUBINIT: Interacts with TJP1/ZO1 and with WAPA.

- SUBINIT: Interacts motherial and endothelial cells. Highly expressed in kidney. Not detected in testis.

- DOMAIN: The C-terminal is cytoplasmic and is important for interaction with ZO-1. Sufficient for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity).

- IP TMN: Phosphorylated (By similarity).

- IP TMN: PROSPHORYLATE (By ELL / occludin family.

-!- SUBGNIT: Interacts with VAPA (By similarity).

-!- SUBGELLUIAR LOCATION: Integral membrane protein.

-!- SUBCIFICITY: Localized at tight junctions of both epithelial and endothelial cells.

-!- DOMAIN: The C-terminal is cytoplasmic and is important for interaction with 20-1. Necessary for the tight junction of calization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity).

-!- PTM: Phosphorylated. Less-phosphorylated forms are found in basolateral membrane, cytosol and tight junction. More-heavily phosphorylated forms are concentrated exclusively in tight
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Euteleostomi;

With development, became gradually concentrated at the most basal regions of Sertoli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       tight junction. May play a role in the formation and regulation of the tight junction (TJ) paracellular permeability barrier.
--- SUBUNIT: Interacts with TJP1/ZO1 and with VAPA (By similarity).
--- SUBCELLULAR LOCATION: Integral membrane protein.
--- TISSUE SPECIFICITY: Localized at tight junctions of both epithelial and endothelial cells. Highly expressed in the testis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     kidney, lung, liver and brain. Not detected in skeletal muscle, spleen and heart.

à

DOMAIN: The C-terminal is cytoplasmic and is important for interaction with ZO-1. Necessary for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity). FUM: Phosphorylated (By similarity). SIMILARITY: Belongs to the ELL / occludin family.

Phosphoserine (by CK2) (in vitro).
9694CD302BEBBEDE CRC64;
Brages.

DOMAIN: The C-terminus is cytoplasmic and is important for interaction with ZO-1. Necessary for the tight junction interaction. Involved in the regulation of the permeability barrier function of the tight junction (By similarity). PTM: Phosphorylated.

SIMILARITY: Belongs to the ELL / occludin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ; DB 1; Length 493;

TISSUE SPECIFICITY: Localized at tight junctions of both
expressed and endothelial cells, Highly expressed in lung and
liver. Expressed at a lower level in brain.

DOMAIN: The C-terminal is cytoplasmic and is important for
interaction with ZO-1. Necessary for the tight junction
localization. Involved in the regulation of the permeability
barrier function of the tight junction. The second extracellular
domain may also be implicated in the permeability barrier function
